- Call your clinic to make an appointment
- If you do not have a doctor, dial **811** *option 3*

This booklet is not intended to replace the advice of a medical professional, nor is it intended to be a substitute for medical care.

Allergies occur when the body reacts to something it identifies as harmful. A wide range of substances can cause a reaction, including: food, insect stings, animals, plants, medication, and chemicals.

What to do at home

Calm: Stay calm, don't panic.

Medication: Take allergy medication as advised by your pharmacist (e.g., Reactine[®], Benadryl[®], Claritin[®], Aerius[®]).

Nose: If congested, do a nasal rinse. Use a saltwater solution purchased from the pharmacy or a homemade solution: Mix 4 cups of water, 2 teaspoons of salt and ½ teaspoon of baking soda.

Monitor: Write down what triggered the allergy and your reaction to help you better understand and assess the risks.

Protection: Avoid the food or substance that caused the reaction.
